

CFMF :Lessons Learned from a GC **(1.0 hours, 1.0-AIA HSW)**

Experience the installation of CFMF from a General Contractors eyes through job site photos over the past 15 years. Review common challenges from shop drawing to installation of the system. Find out what are the most common constructability concerns found in the field. We will review coordination requirements with other trades, such as masonry, metal panel, and other girt and veneer systems, and some interesting installations by the CFMF Contractors.

Learning Objectives:

- 1. Understand the challenges the installers face with the installation of CFMF with regard to structure tolerances.***
- 2. Provide an understanding of the coordination needed with veneer and other trades that are affected by the CFMF design and installation.***
- 3. Discuss common issues found in the field and provide better detailing to avoid installation errors.***
- 4. Define the needs of the project as a whole and provide possible solutions to reoccurring issues found in the field.***
