

Contractor Confessions to Help Improve Specifications and Drawings

Years of lessons learned, everything from foundation to roof and everything in-between, as a contractor has provided a proactive understanding on how to improve specifications and drawings. We will identify valuable lessons from hundreds of construction projects to make the bidding and construction process smoother.

Upon completion of this program, participants will be able to:

1. Review building envelope and firewall detailing lessons learned from many past projects and discuss how to best implement them in your drawings today.
2. Recognize concerns with incomplete specifications with regarding head-of-wall and building envelope transition detailing and understand what should be included or not included for better outcomes.
3. Coordinate between the specifications and drawings with the understanding of how different building components are currently not properly addressing the specification gaps between these components.
4. Apply what you have learned about these building envelope and firewall lessons learned and transitions system detailing to produce a better set of construction documents.
