

Protecting Windows, Glass, Aluminum, Floors, Counter Tops and more

Construction sequencing seems to be placing sensitive materials in harms way due to many factors. Protection of sensitive materials is very important!

- **Windows prior to concrete**
- **Moisture sensitive materials in an open environment**

Sometimes we need to protect finish building materials due to demolition or reconfiguration.

- **Interior materials will be in a now exterior environment or potential damage by the trades**

ARMOR-GUARD is a weather-resistant, non-flammable protective Strippable coating designed specifically to provide protection to multiple construction surfaces.

Concrete Splatter on aluminum & glass - protected with Armor Guard
(concrete will damage aluminum & glass finishes)

Armor Guard on and glass aluminum (interior)
(Interior installation seen from the exterior)

Armor Guard Protection of existing flooring
(Potential exterior moisture/construction damage)

Armor Guard Protection of existing terrazzo
(Potential exterior moisture/construction damage)

I suggest looking into having our Contractors utilize Armor Guard Coating.

All materials should be tested prior to use...Contact the Quality Department for any questions.

Armor Guard can be purchased at 365 Equipment & Supply
