

Quality Notes Low Emitting Materials Compliance

06-05-2019

Three ways to determine VOC/TVOC* product compliance.

Limits ensure that contaminants in products do not exceed maximum concentration levels that might affect health.

1. Product labels

(printed on package or GreenGuard Gold label)

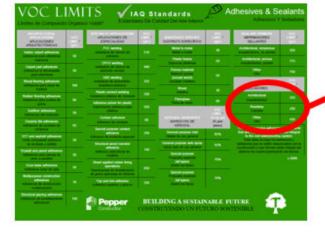

2. VOC Limits displayed on site (ask PCC

Supervisor

for location)

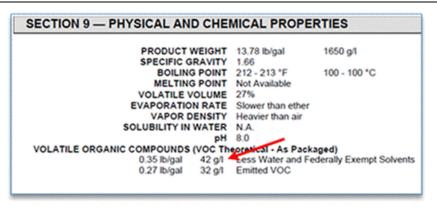

For example, caulks are considered architectural sealants. A sealant with a VOC content of 43 g/L is less than the allowable 250 g/L shown on the chart and is therefore acceptable.

3. Product literature or MSDS

(call supplier, go online, or contact the HP Dept.)

If you have any questions about VOC limits, please contact Susan Heinking.

*Total Volatile Organic Compounds
