

Quality Notes 092216 Interior Framing - 05 12-03-2019

When we install interior framing in a window condition or demountable partitions, and when a header is not practical...the framing members will be hanging off the floor above and the adjacent jamb is resting on the concrete. We have a <u>differential</u> <u>movement condition</u>, where the wall above the window/ demountable partitions is moving with the <u>floor above</u> and the adjacent jamb is moving with the <u>floor below</u>.

## In these conditions, we need to install an EJ in the framing (stud on either side) and sheathing at the jamb.

\*Note –When a window has a header to the jamb – no EJ is needed

Talk to your interior framing Architect & subcontractor before starting the work
